

## PHARMACY

## Introduction

Pharmacies (also known as "drugstores" in American English) are retail stores that sell medicines in particular. At pharmacies, pharmacists monitor prescription compliance and make it available to patients on prescription or over-the-counter medications, or health and wellness issues. A typical pharmacy is located in a community industrial zone.
Pharmacies typically require a qualified pharmacist to work during business hours. In many cases, the owner of the pharmacy also needs to be a registered pharmacist, but this does not apply to all jurisdictions. Many retailers (including supermarkets and mass marketers) have introduced pharmacies as a division of their stores, if permitted.

## Market Potential

The pharmacy retail market in India has witnessed significant growth over the past few years, owing to favourable demographic factors and an epidemiological transition.
In terms of revenue, the pharmacy retail market in India was valued at INR 996.68 billion in 2016 and is projected to reach INR 2,330.2 billion by 2024, expanding at a CAGR of $10.08 \%$ during the 2019-2024 period. The market is majorly occupied by unorganized local players. However, the unorganized sector is anticipated to face intense competition from organized players and online retailers. Increased affordability, improved accessibility and epidemiological transition are expected to fuel the pharmacy retail market in India during the forecast period.

## Assumptions

1. For SME unit having yearly turnover of 500 lakhs, the Nayak Committee recommendation has been implemented by all the banks. Hence, we have worked out the funding requirement accordingly.
2. Sales of such trading units is majorly impacted by the selection of business location. The entrepreneur should examine all business aspects while selecting this location. Normally, a pharmacy is established in a prevalent market area. Thus, we have assumed that the unit has been set up in a market area.
3. The shop premises of this unit is taken on lease. 300 sq . ft . is the proposed area which shall be spacious for stock display and stock-keeping.
4. Computation of Closing Stock is done on the basis of Working Capital cycle which is assumed to be of 1 months.
5. DSCR is high because of the term loan component is lesser than working capital requirement. We have not considered repayment for working capital and it is running on a continuous basis.
